The Climate Crisis is an urgent threat – Wind power is one of the solution we have to slow down climate change and to transform our current fossil fuel based energy system towards a more sustainable energy system.

Sweden has adopted clear climate and energy goals, with the target of a **100 % renewable electricity by 2040** and net zero emissions by 2045.

Sweden has excellent conditions for wind power and with that can quickly reduce emissions, while increasing industry’s competitiveness and building a new large-scale green sector which create new job opportunities.

Join Higher Vocational Education!

- “Renewable energy is the future.”

Around 3000 new wind turbines will be build in the next decade in order to achieve the climate goals. Already today, there is a **high demand for wind turbine technicians and it is fast-growing**! Wind power is expanding in Europe and in other parts of the world with good job opportunities everywhere.

As a wind power technician, you are responsible for high-tech solutions and enormous constructions - in the middle of nature. Working as a wind power technician is a job with a lot of flexibility and freedom as well as great responsibility. You work both independently and in teams. A job that suits those who want to explore new places and like to be outdoors.

“You will have one of the most in demand jobs of the future”
Electrician

While others service computers and cars, you will learn about troubleshooting complicated mechanical, hydraulic, and electrical problems on variable pitch, variable speed turbines.

Climbing expert

You will complete a climb test and tower rescue training even though new wind turbines have elevators. Health and safety always comes first.

"Like being a technician at higher heights"

Responsible for keeping the turbine running

It is a job with a lot of freedom where you can plan your own day. You are responsible for maintenance and repairs as well as for client contact.

"Everything from simple repairs to fault-finding."

Working in teams

You are typically working in a team, which is why “can do” attitude and team working skills are important. Often one is responsible for one or more wind farms.

Where do you want to live?

Great flexibility whether you want to live in the countryside and work locally or discover new places. Yet another adventurous alternative: offshore wind.

"I want to work abroad, in warmer climates."
WHY become a WIND TURBINE TECHNICIAN?

- Flexibility and freedom as well as great responsibility
- Good job opportunities in Sweden and international
- Good career opportunities in the industry
- High and fast-growing demand

- In collaboration with industry and industry organizations-

Higher Vocational Training is a great way to your future career!
